***Response to Amendment***

Applicant's amendment dated 02/19/2002 has been received and entered.

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 3 stand rejected under 35 U.S.C. <sup>103a</sup>102(b) as being anticipated by Amstutz et al., US Patent No. 4,634,229, in view of Furuta, US Patent No. 5,699,133, as stated in the previous office action.

Although claims 1 is now amended, such amendment "liquid crystal device performs white display utilizing birefringence of said liquid crystal when voltage is not applied thereto, and performs black display when driven" is not sufficient to overcome its rejection in the previous office action.

Applicant is reminded that Amstutz et al. do disclose that axes of the polarizing plates are orthogonal to each other as shown in figure 4 (i.e.,  $\beta + \gamma = 90^\circ$ ). In other words, the Amstutz et al. LCD can be operated in normally-white (i.e., liquid crystal device performs white display utilizing birefringence of said liquid crystal when voltage is not applied thereto, and performs black display when driven by applying a voltage)

Art Unit: 2871

In response to Applicants' argument that Amstutz et al. do not disclose the applying voltage of 10V to 20V, the Examiner agrees that Applicants' view point; however, Furuta does disclose that the applied voltage can be 10 to 20V (figure 4). Therefore, it would have been obvious to one skill in the art at the time invention was made to apply a voltage as shown by Furuta in the Amstutz et al. device since it is a common practice in the art to use a high voltage for a liquid crystal shutter in order to obtain a high light transmission (col. 3, ln. 26).

Accordingly, the rejection of claims 1 and 3 stand.

### ***Conclusion***

3. Applicant's arguments filed 02/19/2002 have been fully considered but they are not persuasive as stated above.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

Art Unit: 2871

will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
